Internet of Things

We work systematic integrate corporate responsibility in our core business and make our expertise.

Bot Development

Bots are user-friendly software that allows automated interactions with humans.

R&D AND INNOVATION CONSULTING

DEVELOP

Cyberfane R&D experts will help you upgrade your existing products and also help you build high-tech solutions. By delivering a unique breakthrough customer experience, you will make your business stand out.

INNOVATE

We will identify unique technological solutions to augment your existing offerings. We will also help you implement them, using an agile process. Our objective is to achieve desired results in a quick, smooth, and efficient way.

EVALUATE

Our team of experts will perform a feasibility study and prototyping of your idea to assess its potential Return on Investment. This will help us define technology constraints and foresee possible risks. We make sure to prevent late-breakage of solutions.

FASTER

Our R&D experts will do the heavy lifting for you by creating a Minimum Viable Product to see how users interact with your solutions so that it could be further improved and developed into a product with great product-market fit.

BLOCKCHAIN TECHNOLOGIES

COST EFFECTIVE

With distributed ledger technology, it becomes possible to avoid costly intermediary services, such as lawyers, brokers and bankers, to ensure legitimacy and security of transactions. By eliminating third-party intervention, we can significantly bring down transaction costs and optimise efficiency.

SECURE

Administrative control is crucial to most businesses. But the maintenance and regulation of such control requires a lot of effort and resources. This can be optimized with Smart Contracts. Blockchain provides transparency between all parties without sacrificing data security even in a semi-trusted environment.

OPTIMISE

Cash transactions can take hours or even a few days especially during holidays or weekends. This affects company performance and may stop critical business processes.

Blockchain enables you to carry out financial operations within minutes at any place, round the clock, without third party intervention.

REINFORCE

Blockchain technology enables tracking any product metadata such as price, location, date, quality etc. over the complete product lifecycle. This allows businesses to address supply chain issues such as lack of transparency, reliability, traceability and security.

DEEP LEARNING FOR BUSINESS

CUSTOMER-FIRST

Your consumer data offers valuable insight into the needs and pains of the people who buy from you. Use this data to segment your audience and deliver a personalised customer experience that improves conversion rates and maximises customer lifetime value.

BUSINESS DECISIONS

Transform all of your organisation's information into business insights and provide your key stakeholders with actionable data to power more efficient business decisions. This will enable them to foresee & manage risks better.

RECOMMENDATIONS

With smart and personalised product recommendations, you can engage more buyers and convert them into customers faster. You will increase your average order value as well as reduce workload and overhead for your salespeople. Win-win.

PERFORMANCE

With Data Science, you can easily and effectively optimise operations and automate your key processes, improve controls, measure and better manage performance and productivity as well as facilitate capacity planning. Work smarter, not harder.

INTERNET OF THINGS DEVELOPMENT

PERFORMANCE

Cyberfane's experts will help you integrate connectivity to your internal processes to improve employee tracking, performance and efficiency. You can use sensors for better insights into workflows as well as to improve organisational security.

IMPROVE

If you're looking to reinforce your business through connected products or services, you can fully rely on our IoT development expertise. We will help you build exemplary products. We will also help you replace your legacy systems with smarter, connected ones.

ENGAGEMENT

Using connected devices such as smart meters and sensors to gain deep consumer insights, allowing you to improve personalization and customer engagement. We will set up the environment for you to gather valuable customer data to enable a smart, personalized sales process.

ORCHESTRATE

We will help you build scalable and centralised control over your infrastructure, services, applications and data flow. That way, you can optimize your business effectiveness to significantly reduce the total delivery time for your products and services.

DATA SCIENCE FOR BUSINESS

CUSTOMER-FIRST

Your consumer data offers valuable insight into the needs and pains of the people who buy from you. Use this data to segment your audience and deliver a personalised customer experience that improves conversion rates and maximises customer lifetime value.

BUSINESS DECISIONS

Transform all of your organisation's information into business insights and provide your key stakeholders with actionable data to power more efficient business decisions. This will enable them to foresee & manage risks better.
